Note on Meeting Minutes:

We did meeting minutes by hand, then sent relevant action items to individual teammates. We have uploaded a digitized version of the overview of our meeting minutes, with dates and times.

Member's Contributions

As our GitHub commit history will undoubtedly show, Gordon Gu and Darian Valdez went above and beyond what was necessary for their roles. However, this does not mean others were not working to fulfill their jobs and duties. Gayathri Gude and Joanne Liu created the front end UI, but they did not commit it to GitHub, due to working in Visual Studio, which were causing for cshtml reference errors. They furthermore helped link their front end code to the

backend code, to ensure a strong linkage. Their work was pushed to google drive, and this work was committed to git by both Daniel and Darian at one time or another, since their GitHub pushes did not causes errors. Furthermore, Daniel and Darian pair programmed at times, but on Darian's computer, leading to his commits far outweighing Daniel's. Finally, Zack's work was more algorithmic and acted as a framework for code to be made from, so it does not show up on GitHub.

All other components of Milestone 7 can be found in our GitHub repository's ReadMe file.
